

ReferralConnect Platform

API Specifications, Endpoints & Use Cases Documentation

Executive Overview: ReferralConnect is an Enterprise Employee Referral and Automated Hiring Platform. It provides a robust RESTful API backend coupled with AI-driven resume parsing, algorithmic job matching, and direct Applicant Tracking System (ATS) integrations like Greenhouse and Lever. Below is the complete reference of all internal and external APIs along with their specific use cases.

1. Authentication & User Management APIs

Handles multi-role registration (Candidate, Employee, Admin), JWT authentication, and session verification.

Method	Endpoint Route	Auth / Role	Use Case & Description
POST	/api/auth/register	Public	Registers new candidates or employees. Validates corporate email domains for referrer role.
POST	/api/auth/login	Public	Authenticates user credentials and issues a signed JWT Token for authorized requests.
GET	/api/auth/me	JWT Bearer	Verifies current user session, token validity, and fetches active role and profile data.

2. Job Openings & AI Description Parser APIs

Manages corporate job postings and leverages AI models to extract structured skills from raw text.

Method	Endpoint Route	Auth / Role	Use Case & Description
GET	/api/jobs	Public	Fetches active published job openings with title, company, location, and requirement filters.
POST	/api/jobs	Employee / Admin	Creates a new job posting linked to verified company profile and employee account.
POST	/api/jobs/parse-jd	Employee / Admin	AI JD Parser: Sends raw JD text to LLM/NLP to auto-extract skills, min/max experience, and title.

3. Job Seeker & Resume Processing APIs

Manages candidate profiles, resume PDF uploads, and automated skill extraction.

Method	Endpoint Route	Auth / Role	Use Case & Description
GET	/api/seekers/profile	Job Seeker	Retrieves candidate profile, bio, headline, uploaded resume path, and parsed skills.
POST	/api/seekers/resume	Job Seeker	Uploads PDF resume (<=5MB), parses text buffer, updates candidate profile & skills automatically.

PUT	/api/seekers/profile	Job Seeker	Allows candidates to manually edit headline, location, experience years, and skill tags.
-----	----------------------	------------	--

4. Referral Matching Engine & Application Tracking APIs

Powers personalized job matching algorithms and referral workflow progression.

Method	Endpoint Route	Auth / Role	Use Case & Description
GET	/api/referrals/feed	Public / Seeker	Returns jobs feed enriched with real-time AI Match Score (0–100%) based on candidate skills.
POST	/api/referrals/apply	Job Seeker	Submits a formal referral request to an internal employee with optional candidate note.
GET	/api/referrals/my-requests	Job Seeker	Tracks candidate's active referral applications (Applied, Under Review, Referred, Hired).
GET	/api/referrals/dashboard	Employee	Displays all incoming candidate referral requests for employee review with resume links.
PATCH	/api/referrals/:id/status	Employee / Admin	Updates application status (e.g. Under Review -> Referred / Interview / Hired / Rejected).
POST	/api/referrals/:id/push-ats	Employee / Admin	Pushes approved candidate referral directly into external ATS system (Greenhouse/Lever).

5. Realtime Notifications & Enterprise Admin APIs

In-app notification system and platform-wide admin controls.

Method	Endpoint Route	Auth / Role	Use Case & Description
GET	/api/notifications	JWT Bearer	Fetches real-time in-app alerts (e.g., status changes, new referral requests).
PATCH	/api/notifications/:id/read	JWT Bearer	Marks a specific notification as read.
GET	/api/admin/stats	Admin	Returns platform analytics: total candidates, active jobs, referrals made, success rates.
GET	/api/admin/companies	Public / Admin	Lists registered companies and verified domain configurations.
POST	/api/admin/ats-config	Admin	Configures enterprise ATS API keys (Greenhouse/Lever) and webhooks with encryption.

6. External Third-Party APIs & Integrations

External API Service	Endpoint / Target	Use Case & Primary Function
Ollama Local LLM API	http://localhost:11434/api/generate	Executes Llama 3.2 model to parse unstructured JD text into structured JSON schema (skills, min/max exp, location).
Greenhouse Harvest API	https://harvest.greenhouse.io/v1/applications	Directly creates candidate applications inside company Greenhouse ATS upon employee referral approval.
Lever Candidates API	https://api.lever.co/v1/candidates	Pushes approved applicant details, notes, and resume links into company Lever ATS pipeline.
